Java

```java
class Solution {
  public String[] splitMessage(String message, int limit) {

  }
}
```

JavaScript

```javascript
/**
 * @param {string} message
 * @param {number} limit
 * @return {string[]}
 */
var splitMessage = function(message, limit) {

};
```

TypeScript

```typescript
function splitMessage(message: string, limit: number): string[] {

};
```

C++

```cpp
class Solution {
public:
  vector<string> splitMessage(string message, int limit) {

  }
};
```

C#

```csharp
public class Solution {
  public string[] SplitMessage(string message, int limit) {

  }
}
```

Kotlin

```kotlin
class Solution {
  fun splitMessage(message: String, limit: Int): Array<String> {

  }
```

```
}
```

Go

```go
func splitMessage(message string, limit int) []string {

}
```
